HealthLens User Instructions Guide

1. Access and Authentication

The project begins at the secure **Patient Health Portal**.

- **Login**: Registered users enter their **Username** and **Password** to access their private clinical dashboard.
- **Registration**: New users can navigate to the **Register** tab to create a new patient profile within the system.

2. Setting Up Your Patient Profile

Once authenticated, you will arrive at the **Upload & Analyze** dashboard to input your current health status.

- **Demographics**: Enter your basic information, including **Age** and **Sex**.
- **Physical Metrics**: Input your **Height (cm)** and **Weight (kg)**.
- **BMI Calculation**: The system automatically computes your **BMI** and provides a weight category (e.g., "Normal") in real-time.
- **Symptom Checklist**: Select any current physical symptoms, such as **Fatigue**, **Blurred Vision**, or **Chest Pain**, to add clinical context to your report.

3. Uploading and Processing Medical Reports

This stage handles the ingestion of your laboratory documents.

- **File Selection**: Use the "Drag and drop" area to upload a medical report in **PDF**, **JPG**, or **PNG** format.
- **Validation**: The system confirms the file type and size to ensure the data is compatible with the extraction engine.
- **Execution**: Click the **Run Analysis** button to begin the multi-stage extraction pipeline.
- **Progress Tracking**: Monitor the **Analysis Progress** bar to see when the system hassuccessfully moved from extraction to scoring.

4. Reviewing Detailed Results

After the analysis is complete, navigate to the **Detailed Results** tab to interpret the findings.

- **Extracted Indicators**: Review a structured table displaying key biomarkers like **Glucose**, **HbA1c**, and **Cholesterol**.
- **Clinical Flags**: Look at the **Flag** column to see if values are categorized as **Low**, **Normal**, or **High** based on clinical reference ranges.
- **Risk Summaries**: Examine the **Diabetes** and **Heart Disease** risk assessments, which include a **Risk Level** (e.g., "High") and a **Confidence Score**.
- **Contributing Factors**: Read the bulleted summary explaining *why* the system assigned a specific risk level based on your bloodwork and inputs.

	Indicator	Value	Unit	Reference	Flag
0	glucose	132	mg/dL	70–99	High
1	hba1c	6.7	%	< 5.7	High
2	cholesterol_total	235	mg/dL	< 200	High
3	ldl	160	mg/dL	< 100	High
4	hdl	38	mg/dL	> 40	Low
5	triglycerides	210	mg/dL	< 150	High
6	systolic_bp	145	mmHg	< 120	High
7	diastolic_bp	92	mmHg	< 80	High

5. System Logout

- When finished, use the **Logout** button in the left sidebar to securely end your session and clear your active profile data from the interface.
