HealthLens User Instructions Guide

1. Access and Authentication

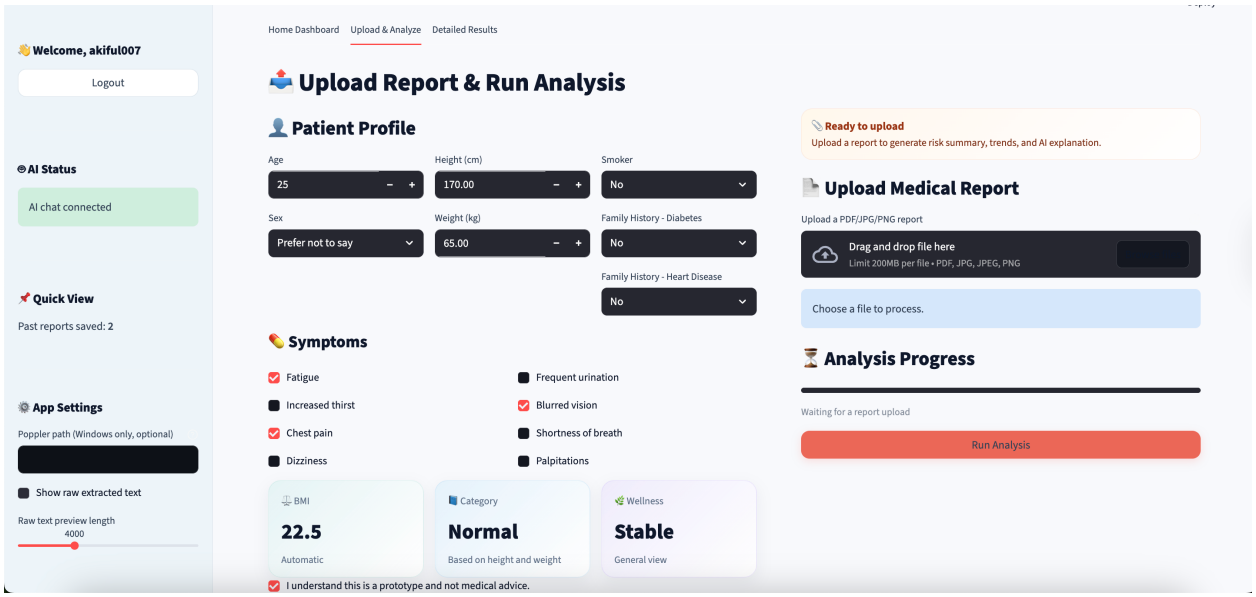
The project begins at the secure **Patient Health Portal**.

- **Login**: Registered users enter their **Username** and **Password** to access their private clinical dashboard.
- **Registration**: New users can navigate to the **Register** tab to create a new patient profile within the system.

2. Setting Up Your Patient Profile

Once authenticated, you will arrive at the **Upload & Analyze** dashboard to input your current health status.

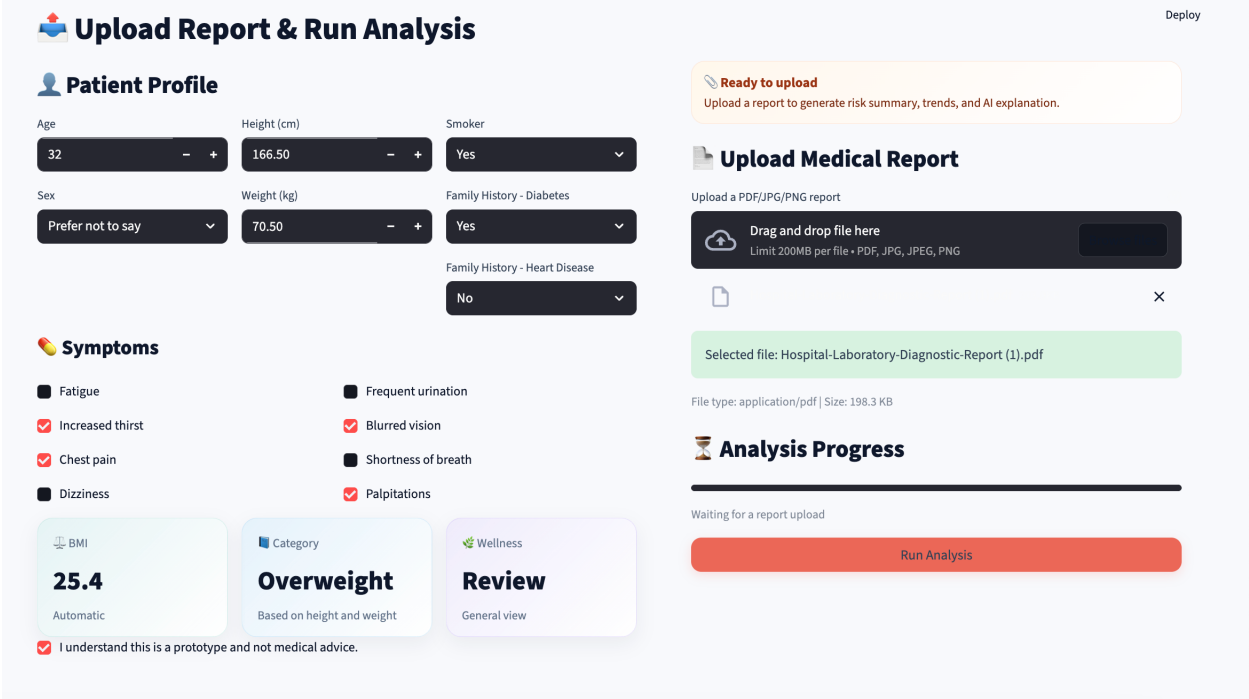
- **Demographics**: Enter your basic information, including **Age** and **Sex**.
- **Physical Metrics**: Input your **Height (cm)** and **Weight (kg)**.
- **BMI Calculation**: The system automatically computes your **BMI** and provides a weight category (e.g., "Normal") in real-time.
- **Symptom Checklist**: Select any current physical symptoms, such as **Fatigue**, **Blurred Vision**, or **Chest Pain**, to add clinical context to your report.



3. Uploading and Processing Medical Reports

This stage handles the ingestion of your laboratory documents.

- **File Selection**: Use the "Drag and drop" area to upload a medical report in **PDF**, **JPG**, or **PNG** format.
- **Validation**: The system confirms the file type and size to ensure the data is compatible with the extraction engine.
- **Execution**: Click the **Run Analysis** button to begin the multi-stage extraction pipeline.
- **Progress Tracking**: Monitor the **Analysis Progress** bar to see when the system hassuccessfully moved from extraction to scoring.



4. Reviewing Detailed Results

After the analysis is complete, navigate to the **Detailed Results** tab to interpret the findings.

- **Extracted Indicators**: Review a structured table displaying key biomarkers like **Glucose**, **HbA1c**, and **Cholesterol**.
- **Clinical Flags**: Look at the **Flag** column to see if values are categorized as **Low**, **Normal**, or **High** based on clinical reference ranges.
- **Risk Summaries**: Examine the **Diabetes** and **Heart Disease** risk assessments, which include a **Risk Level** (e.g., "High") and a **Confidence Score**.
- **Contributing Factors**: Read the bulleted summary explaining *why* the system assigned a specific risk level based on your bloodwork and inputs.

	Indicator	Value	Unit	Reference	Flag
0	glucose	132	mg/dL	70–99	High
1	hba1c	6.7	%	< 5.7	High
2	cholesterol_total	235	mg/dL	< 200	High
3	ldl	160	mg/dL	< 100	High
4	hdl	38	mg/dL	> 40	Low
5	triglycerides	210	mg/dL	< 150	High
6	systolic_bp	145	mmHg	< 120	High
7	diastolic_bp	92	mmHg	< 80	High

5. Understanding the Dashboard (Health Summary View)

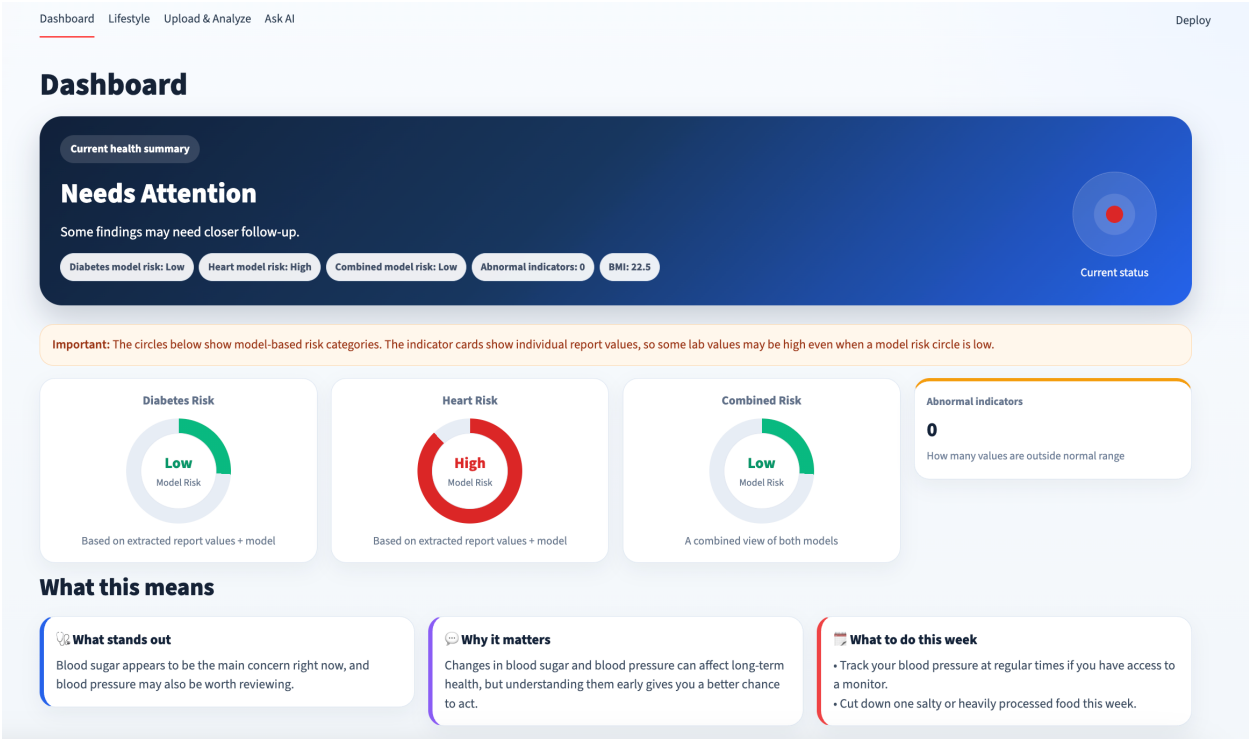
The Dashboard provides a high-level summary of the user's health status after report analysis. It is designed to quickly highlight potential concerns and guide users toward actionable insights.

Overview of the Dashboard

The top section displays a Current Health Summary banner, which includes:

- Status Indicator: A label such as "Needs Attention" indicating whether follow-up may be required.
- Quick Metrics: A set of summary badges showing:
- Diabetes Model Risk (e.g., Low)
- Heart Disease Model Risk (e.g., High)
- Combined Risk Level
- Number of Abnormal Indicators
- Calculated BMI value

This section gives users an immediate understanding of their overall health condition.



6. System Logout

When finished, use the **Logout** button in the left sidebar to securely end your session and clear your active profile data from the interface.
